

## Architectural Electrical Design Technician/Engineer

Christopher Kidd and Associates, LLC – Milwaukee, WI

Architects, Engineers, Planners

Christopher Kidd and Associates is currently seeking a building Electrical Systems Engineer for our Menomonee Falls, Wisconsin office. CKA provides award winning, fully integrated architecture, engineering, planning and consulting services to help clients realize their most complex facility and infrastructure projects. With a tradition of excellence that began in 1995, our dedicated staff of architects and engineers are committed to bringing extraordinary solutions to our clients through the promise of imagination, ingenuity and innovation. We are nationally recognized for our specialized expertise in medical office buildings, hemodialysis clinics, retail, commercial and education. If you're interested in working in a creative and collaborative environment to meet the needs of growing businesses, then please consider joining our energetic and specialized team.

CKA Headquarters are located in Menomonee Falls, Wisconsin, with a regional office in Fort Collins, Colorado. We recently opened a field office in Sheboygan, Wisconsin and are set to open our newest office in Milwaukee, Wisconsin later this year.

### Minimum Qualifications:

- Bachelor's degree in Architectural Engineering from an ABET accredited University
- Must possess excellent oral and written communication skills
- Possess an exemplary work ethic, be detail-oriented and able to prioritize
- Experience in Electrical Engineering design of building systems a plus
- Working knowledge of AutoCAD and Microsoft Office (Word, Excel, PowerPoint)
- EIT Certification (or interest in obtaining), preferred but not required.
- Depending on experience, this position would be under supervision of a licensed Professional Engineer specializing in Building Electrical Systems

### The Opportunity:

- Participate in electrical engineering development creating schematic, design development and construction documents, specifications and construction administration for medical, institutional and commercial building projects.
- Communicate and coordinate with architects, owners, other engineering disciplines, vendors, building officials, other consultants, etc. throughout the design phases of the building project as skills and competencies are developed.
- Office construction administration including review of shop drawings, respond to RFIs, and coordinate with contractors, design team, building officials, owners, etc. through the construction phase of the building project as skills and competencies are developed.
